Business Situation Summarized

FURTHER recession in general business activity occurred in October and early November, and in general such gains as were realized were less than seasonal. Retail trade expanded and for department stores alone the increase was greater than the usual gain. Industrial production declined for the sixth successive month and in October was 18 per cent below the peak of the spring rise in April. For the elapsed 10 months, the adjusted index averaged 16 per cent below a year ago while the October index was off 15 per cent. The loss in October was the result of a further drop in manufacturing, as the mineral output increased more than seasonally. The principal gains were in the output of coal and petroleum with iron ore sharply lower, and the nonferrous metal group slightly changed. Decreases in manufacturing industries were general.

Factory employment and pay rolls underwent a further contraction in October. The pay-roll index was 4 per cent below the preceding month and was only a little more than half of the peak reached in 1929. Increased employment was confined to the tobacco, and paper and printing industries, but in both the increases were less than seasonal. Pay rolls were lower, except in the paper and printing, chemical, and tobacco groups, with the largest relative decreases in the textile and leather industries which up to now have been doing relatively well.

Car loadings increased in October, but after allowing for the number of working days, the index was unchanged. Variation in the unadjusted index this year has not been large, but the adjusted index has receded steadily and in October was 16 per cent below January and 20 per cent below a year ago. Foreign trade remains restricted with a further slight recession in October imports, contrary to the seasonal trend. Exports increased following the gain of September, but, as in the preceding month, the increase was less than seasonal. The value of building contracts awarded in October declined by more than the usual seasonal amount, and a further reduction occurred in the first half of November.

Financial markets improved following the establishment of new low levels in early October. Stock prices moved irregularly upward during the last three weeks of the month, but the trend since the first week of November has been downward. Bond prices have made little progress. The extremely heavy gold export movement in late September and in October has terminated and recently there has been a substantial net gain of gold on balance.

Wholesale prices declined in October, but the lows reached early in that month were followed by some improvement.

MONTHLY BUSINESS INDEXES

Finance—Credit and Banking

THE more important credit changes of the month are reflected in the combined statements of the Federal reserve banks which show sharp increases in money in circulation, in total bills discounted, and in bills bought in the open market. The increase in circulation and the foreign demands upon the gold reserves were met by an expansion of Federal reserve credit of approximately $600,000,000 during the month while the reserve ratio against note and deposit liabilities combined fell from 73.4 per cent to 56.5 per cent.

Toward the end of the month the demands by Europe upon the dollar had practically ceased. With the correction of erroneous impressions abroad concerning the "free gold" holdings of the Federal reserve system and also concerning the method of operation of the new credit corporation, gold exports virtually stopped. Since the end of October the gold holdings of the reserve banks have increased approximately $135,000,000. During the last week of the month money in circulation reversed its previously upward trend and has shown a relatively small increase since the beginning of November. Also, since the middle of October foreign funds held on deposit with the Federal reserve banks have been steadily withdrawn, not, as several weeks ago, in the form of gold exports, but rather through being reinvested in bankers' acceptances as indicated in the weekly rise in bills purchased by the reserve banks on foreign account.

October gold exports and earmarkings represented a record for one month. The cessation of the outflow was as sudden and complete as its inception had been a month before and by the beginning of November the situation, characterized by a physical export of the metal of $398,600,000 during October, had largely corrected itself. Money rates have eased slightly and a drop in acceptance rates on November 9 brought new bills into the market. The Federal reserve banks hold an unusually large proportion of the outstanding acceptances but bills subject to renewal are finding their way into the open market to meet the buying orders which it was difficult early in the present month for the dealers to meet.

Bank debits since the beginning of October have continued highly irregular although debits outside of New York showed an increase during the month as well as during the first week of November. Both loans on securities and "all other" loans by reporting member banks declined steadily throughout October and the first half of November, the reason for the drop in the latter being probably accounted for in part by the sale of bill holdings to the Federal reserve banks. Institutional liquidation of bonds, which kept the bond market weak during the period under review, is evidenced by the October decline of commercial bank investment portfolios. Postal savings deposits have shown an unusual rate of increase.

Finance—Security and Money Markets

SECURITY and money markets were featured during October by the year's sharpest firming of money rates and by a record outflow of gold. Security prices, after reacting favorably to the President's announcement on October 6, relative to the proposed national credit corporation, weakened again but many of the gains were held throughout the month. A general rise in stock prices early in November was followed, toward the middle of the month, by a series of daily declines which carried quotations close to their early October lows.

Bond prices have also been unable to hold their gains of early October. After the suspension of gold payments in England late in September the market was called upon to absorb both stocks and bonds held abroad. The fears abroad which led temporarily to a flight from the dollar and the necessity of domestic institutions to liquidate bond holdings introduced an element of weakness for a period of several weeks into the security markets generally. With the return of confidence in the dollar late in October gold withdrawals ceased and bond prices turned upward for several days early in November.

New capital issues continued throughout October on a very low level. For the first time since the war a whole week passed during which no new issue was brought out. As compared with the corresponding months in 1929 and 1930 total dividend and interest payments showed a relatively small decline during October.

The month's money rates reflected the temporary strain placed upon the financial markets by the pressure on the dollar in foreign centers. The two increases in the New York Federal Reserve Bank's rediscount rate early in October were followed by an upward adjustment in bill rates when the greater part of the bills held by the commercial banks, foreign banks, and acceptance dealers were transferred to the Federal reserve banks. By the middle of the month commercial paper rates and rates on both call and time loans had moved to the highest levels since the end of 1930. Rates have continued firm through the first half of November, although rates on bankers' bills have been cut somewhat owing to the extremely small amount available in the open market after the closing days of October.

The steady decline in brokers' loans, which has been a feature of the security markets throughout the year, continued during October. The recent rule enforced by New York member banks, whereunder they have ceased making loans for the account of outside lenders, has had no perceptible effect owing to the small amount of such loans outstanding.

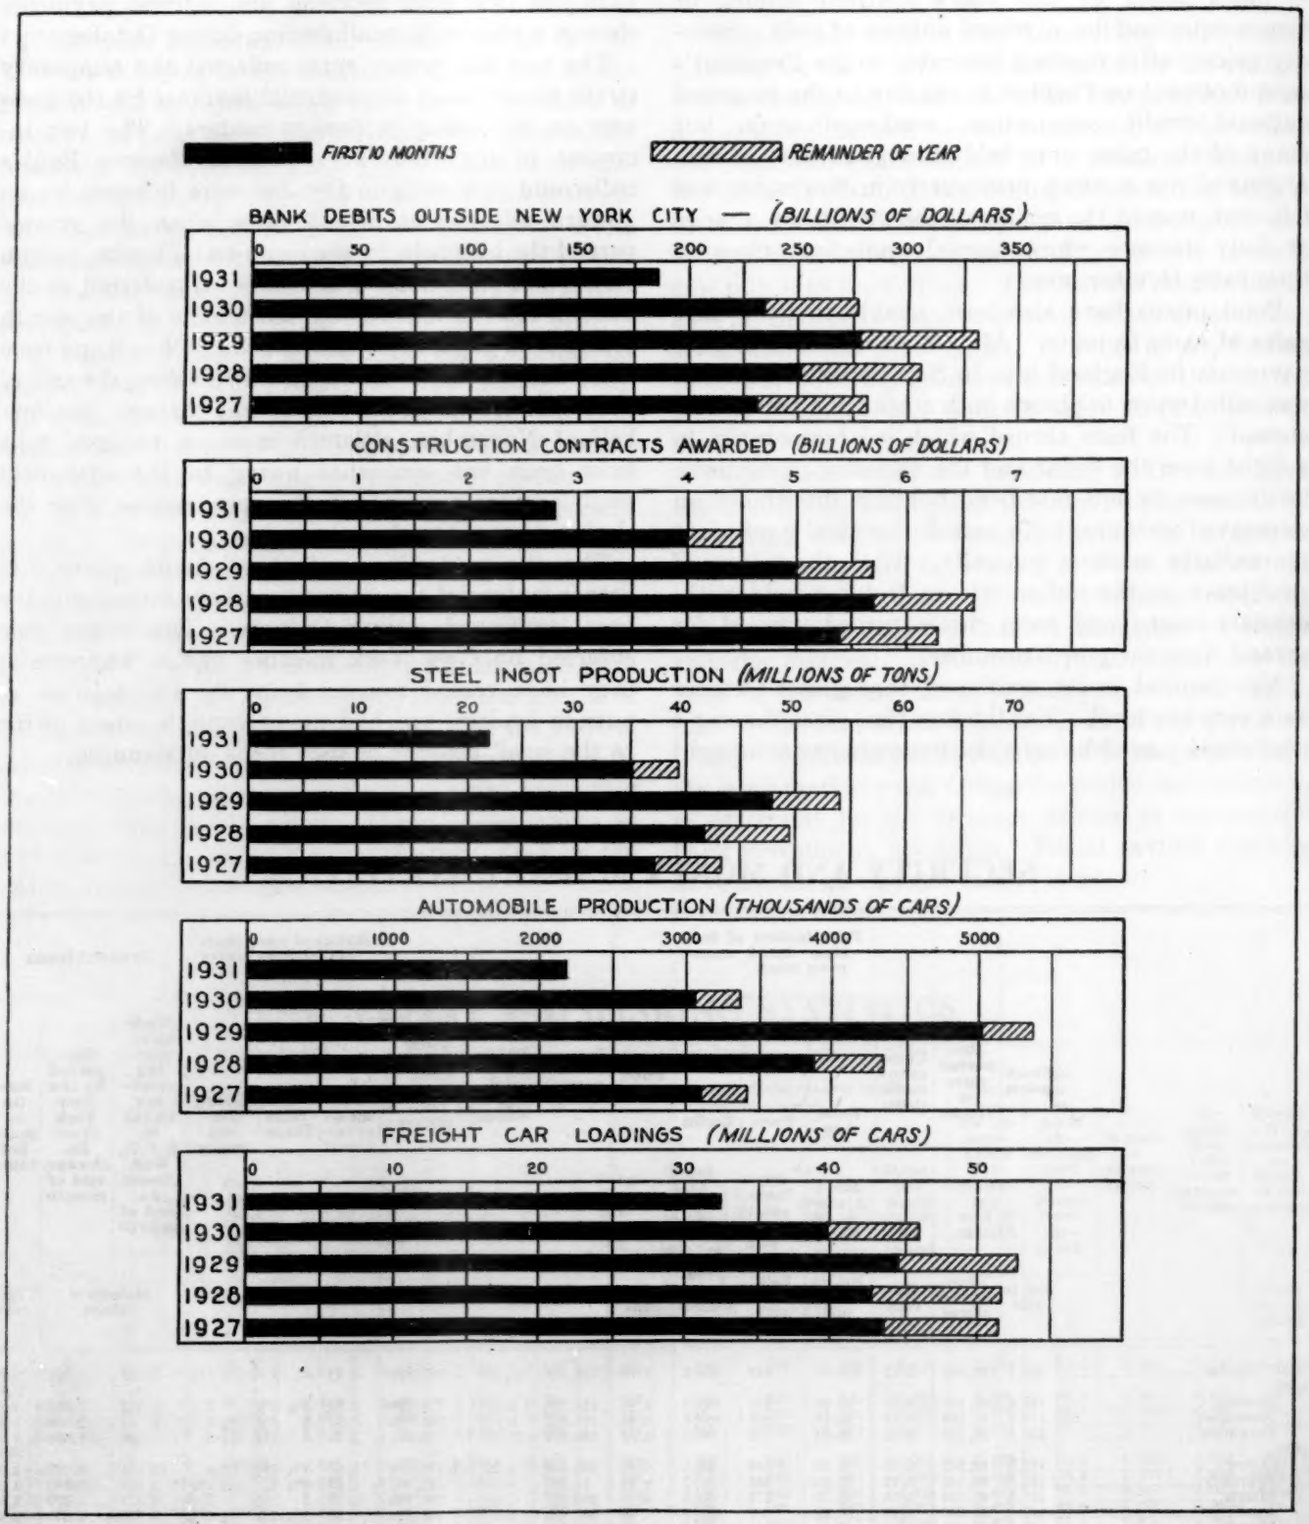
1931 in Comparison



Commodity Prices

PRICES of commodities in October were slightly lower than in September, 1931, but the decline was less than from September to October, 1930, except for prices received by farmers for the products they sell.

Wholesale commodity prices averaged about 1 per cent lower in October than in September, but the decline was less than from August to September and there was additional evidence of an underlying tendency for prices to fluctuate within a narrower range. Of the 550 commodities or price series included in the combined index of wholesale commodity prices, advances occurred in 190 instances and no change occurred in 256 others. Weekly indexes compiled by private agencies indicate that wholesale commodity prices have remained relatively steady during November. Prices of foods, of metals and metal products, of building materials and of chemicals and drugs declined less than 1 per cent and prices of house furnishing goods, of textile products, of farm products, and of hide and leather products dropped from 1.8 per cent to 3.1 per cent. Fuel and lighting materials and miscellaneous products advanced slightly from September to October, 1931. Among the subgroups of commodities drops in prices exceeding 5 per cent occurred in hides and skins, in livestock and poultry, in nonferrous metals, and in fertilizer materials.

Little change has occurred in retail prices of foods since June. On October 15, 1931, retail food prices were 17.5 per cent lower than on the corresponding date of last year. From September 15 to October 15, 1931, declines occurred in 28 of the 42 articles of foods on which retail price quotations are regularly received, prices of 8 articles advanced and those of 6 articles showed no change.

Farm prices on October 15, 1931 were 5.6 per cent lower than on the corresponding date of the preceding month as a result of drops of about 8 per cent each in prices of grains and meat animals, of 10.6 per cent in the price of cotton and cotton seed and of a fall of 15.7 per cent in prices of fruits and vegetables. Prices of dairy and poultry products advanced 6.5 per cent.

Employment

A DECLINE of more than the usual seasonal proportions was recorded in factory employment during October, the seasonally adjusted index thereby receding slightly from the September figure to a new low for the depression. The unadjusted volume of wage payments to factory workers declined by almost 4 per cent from September to October.

The petroleum and rubber products industries were the only groups recording employment increases after seasonal adjustments are made. Declines in employment after seasonal adjustments are made were recorded by the following industrial groups: iron and steel, machinery, textiles, food, paper and printing, lumber, automobiles, leather, cement, clay and glass, nonferrous metals, chemicals, except petroleum, and tobacco.

During the first 10 months of the year factory employment averaged about 15 per cent under the same period last year, and 26 per cent under 1929. Pay rolls during the 10 months were 25 per cent under 1930 and 38 per cent under 1929.

A seasonal increase in employment and volume of pay rolls occurred in retail trade during October; the increase in employment from September was about the same as that recorded for the corresponding period last year. The average number of employees in retail trade during the first 10 months of the year was about 7 per cent less than during the same period last year, while pay rolls averaged about 10 per cent lower.

Both employment and pay rolls of bituminous coal mines increased from September, but the increases were smaller than those normally recorded at this season of the year. The same items for anthracite mining, on the other hand, exceeded the normal increase for the period. Bituminous coal mining employment during the first 10 months of the year averaged about 11 per cent under the same period last year, and employment in anthracite mining averaged 13 per cent under the previous year.

Both employment and pay rolls of power, light, and water companies decreased during October as compared with September. The index of employment decreased by 2.1 per cent, while pay rolls decreased by 1.2 per cent. A similar decrease was recorded during the corresponding period last year. The telephone and telegraph group reported a decline in employment of 1.1 per cent during October as compared with September, and a drop of 0.5 per cent in volume of pay rolls for the same period. Employment and pay rolls of both of these utility groups were materially under October last year.

The proportion of trade-union members employed during October was the same as for the previous three months, 74 per cent. Trade-union employment, however, was more than 6 per cent under October, 1930, and 17 per cent under 1929.

[1] Adjusted for seasonal variation.

Domestic Trade

RETAIL trade expanded in October, although the unusually warm weather in recent weeks has adversely affected sales of seasonal merchandise. Department store sales increased by somewhat more than the usual seasonal amount, and the adjusted index advanced 2.4 per cent, the first gain since April. The dollar volume of October sales was 16 per cent below a year ago, compared with a cumulative decline for the 10 months of 11 per cent. By districts, the best relative showing was made in Boston, New York, Richmond, and Minneapolis for both the latest month and for the year to date. Stocks of merchandise in department stores increased as is usual at this season of the year, but after adjustment the index has varied but slightly in recent months and in October was 13 per cent below a year ago.

Sales of the two largest mail order houses in October also moved up seasonally, but the decrease as compared with a year ago was 24 per cent as against 16 per cent in September. The expansion in sales of 5-and-10 cent stores in October amounted to 18 per cent, which was somewhat less than the usual gain, and the adjusted index was off 2.6 per cent. Actual sales in the first 10 months of the current year were equal to those in the same period of 1930.

Merchandise l. c. l. car loadings declined after the gain of September, but the adjusted index has shown a downward trend for four months. The adjusted index in October was 2.4 per cent below September and 11 per cent below a year ago. For the 10 months to date, such loadings were off 10 per cent from the corresponding months of 1930.

Commercial failures are usually more numerous in October than in the months immediately preceding, but the total last month increased to an exceptionally high point as a result of adverse financial and business developments. After decreasing steadily since April, the number of failures increased 22 per cent over September, 1931, and 11 per cent over October, 1930. Liabilities involved were 76 per cent greater than in the preceding month and were the largest since January. For the first 10 months of this year average monthly failures increased 7 per cent as compared with a year ago, and average monthly liabilities were one-eighth greater.

Magazine and newspaper advertising continued the seasonal upward trend in October. Magazine lineage increased 19 per cent and newspaper lineage 14 per cent over the preceding month, but the cumulative total for the 10 months was 22 per cent and 11 per cent, respectively, below a year ago. Postal receipts have been moving upward since August, and in October were 11 per cent below a year ago. Average monthly receipts for the elapsed 10 months of the current year have been 9.2 per cent below the same period of 1930 and 13 per cent below the 1929 level.

[1] Corrected to average daily sales. [2] Adjusted for seasonal variation. [3] End of month figures.

Foreign Trade

UNITED STATES exports during October increased approximately 14 per cent in value as compared with the exports in September, while imports fell off about 1 per cent. The gain in the former was only slightly less than the normal seasonal increase of 16 per cent, but the drop in imports was contrary to a normal upswing of 7 per cent. The export merchandise balance in October was $36,000,000.

Exports of gold in October—$398,600,000—represented in part amounts earmarked for foreign account during September. Gold imports of $60,900,000 were 26 per cent greater than the imports in September. Exports of gold were shipped largely to France, Netherlands, Switzerland, and Belgium, whereas imports originated in Japan, Argentina, Canada, Sweden, and China, in the order mentioned.

A decline in our exports of industrial machinery during October and the relatively small seasonal expansion in shipments of leaf tobacco were important factors in the less-than-seasonal increase in the value of merchandise exports. Although quantity exports of cotton were considerably lower than the average for the corresponding month of the period 1925 to 1929, inclusive, they were larger than in October, 1930, and showed about the normal increase over shipments in September. Leaf-tobacco exports amounted to only 49,200,000 pounds in comparison with 78,300,000 pounds in the corresponding period of 1930. Shipments of wheat, which had been comparatively small for the first three quarters of 1931, increased considerably during October. Exports to China (including Hong Kong and Kwantung) were heavy, amounting to 4,300,000 bushels, or 36 per cent of the total shipments. Exports of apples and both canned and evaporated fruits showed the usual fall expansion.

Although the decline in the value of exports during October, 1931, in comparison with the corresponding period of 1930, was smaller than the decrease recorded during the two months immediately preceding, it amounted to approximately 37 per cent. Quantity shipments of tobacco, copper, rubber manufactures, cotton cloth, lumber, iron and steel, gasoline, various classes of machinery and automobiles, were considerably smaller and sharp recessions in the price of unmanufactured cotton as well as of practically all other commodities contributed very substantially to the drop in value.

In import trade for the period January–October, 1931, as compared with the corresponding period of 1930, our quantity purchases of coffee, cocoa, and raw silk increased, while crude rubber, cane sugar, newsprint and unmanufactured wool fell off only slightly.

[1] Reexports of foreign merchandise during October, 1931, were $3,515,000.

Transportation

COMMODITY distribution during October, as reflected by the average daily total freight-car loadings, was of about the same proportions as during September and the seasonally adjusted index of the Federal Reserve Board was unchanged from the September figure. Average daily loadings during October were 20 per cent under October, 1930, and 34 per cent under 1929. The average monthly car loadings during the first 10 months of the year were 19 per cent under the corresponding period in 1930 and 29 per cent under 1929.

The daily average movement of merchandise in less-than-carload lots during October decreased by about 1 per cent, and the seasonally adjusted index of the Federal Reserve Board was 2 points below the September figure. October loadings of merchandise were about 10 per cent under October, 1930, and 20 per cent under 1929. During the first 10 months of the current year the average monthly merchandise movement by the railroads was 10 per cent under the same period in 1930, and 17 per cent under 1929. Coal and coke was the only commodity group to register a material increase in car loadings as compared with September, after corrections are made for the number of business days in the two months. During the first 10 months of the year 18 per cent less loadings of coal and coke were reported than for the corresponding period in 1930. Car loadings of ore during the 10-month period were only about one-half those during the same period last year.

The number of idle freight cars was the lowest since November of last year. A drop in number of idle cars was recorded from September to October, although an increase is usual at this season of the year. While the October surplus was the smallest of the year so far, it was still 132,000 cars, or 33 per cent, above the number of idle cars on hand during October, 1930. The October surplus was 24 per cent under the peak recorded in December, 1930.

Monthly payments of dividends by railroads during the first 10 months of the year averaged $38,810,000, compared with $43,280,000 during the same period in 1930 and $38,980,000 in 1929.

The seasonal decrease in traffic tonnage through the Sault Ste. Marie Canal which started in September was continued through October. Traffic through the Cape Cod Canal increased by 12 per cent as compared with the September tonnage.

RAIL AND WATER TRAFFIC

[1] Daily average basis.

[2] Data for January, May, August, November, and October are for 5 weeks; other months, 4 weeks.

Construction

CONSTRUCTION activity during October was marked by a slight increase in residential building, although this revival was confined to only a few sections of the country. The construction of public works and utilities declined from that of the previous month, as did other classes of nonresidential building, and the total value of all types of construction showed a decrease from that in September, although the measurable volume was slightly larger. The seasonal decline in the production, shipments, and new orders of important building materials continued, and the index of construction costs dropped to a new low. Building-material prices for both frame and brick houses showed an increase over those of the previous month.

The total volume of all types of construction contracts awarded increased 2 per cent from September, 1931, but was 22 per cent less than in October, 1930. The total value declined 4 per cent from September and 28 per cent from that of October, 1930. For the 10 months of 1931, volume and value decreased 27 and 30 per cent, respectively, compared with a year ago.

Residential building increased 17 per cent in terms of the total number of square feet and 11 per cent in value from September, but a comparison with October a year ago shows a decline of 32 per cent in volume and 42 per cent in value. During the first 10 months of this year the value decreased 23 per cent from that of the same period in 1930. The value of contracts awarded for public works and utilities fell 3.1 per cent below that of September and was 27 per cent less than in October, 1930.

The shipments of maple flooring declined 14 per cent from those in September, but were only 6.3 per cent less than in the same month last year. Oak flooring shipments declined 6.6 per cent, and cement production fell off 11 per cent from the preceding month. New orders for fabricated structural steel were 44 per cent less than in September.

The index of construction costs (composed of the prices of structural steel shapes, cement, lumber, and the rates paid common labor) declined 0.9 per cent, but building material prices for frame and brick houses rose 1.3 and 0.6 per cent, respectively.

Agriculture

MARKETING of animal products during October increased by slightly more than the usual seasonal amount. The combined index recorded a rise of 4.6 per cent, but part of this advance is discounted by the low revised figure for September. The index for October was 1 per cent below the same month last year, and the monthly average for the first 10 months of the current year was less than 1 per cent under the same period in 1930.

Wool receipts fell off sharply, due largely to a reaction from the high level of the last five months. The monthly average to date still exceeds 1930, by a margin of 3.5 per cent. Livestock marketing reached the high point of the year and brought the monthly average to a level less than 2 per cent below a year ago. Poultry, eggs, dairy products, and fish receipts all declined. The index for fish marketing was 12 per cent below the revised figure for September and was the second marked monthly recession. Average receipts for January through October were 4 per cent higher than last year for poultry and eggs, 2 per cent higher for dairy products, and 22 per cent lower for fish.

Crop marketings in October continued to increase seasonally, but the combined index for the month was 24 per cent below October of last year. Cotton receipts were more than double the September amount and partially absorbed the loss resulting from the less than seasonal gain of the last two months. Fruits, which did not record the usual seasonal grain in September, reached a high for the year. This is only partially a seasonal increase, and extended the gain in the monthly average over a year ago.

The November 1 estimate of wheat production in the United States, made by the Department of Agriculture, showed no change from October, and remained at 884,000,000 bushels. The 1931 potato crop is expected to exceed last year's somewhat scant yield by 39,000,000 bushels and is estimated at 1,000,000 bushels in excess of the 1925–1929 average. No improvement is anticipated in the light crops of hay and feed grains.

Of the citrus fruit crops, it is estimated that oranges will be less plentiful than a year ago except in the case of the Texas output and Florida Satsumas. California and Florida grapefruit will probably be more abundant and the lemon crop will approximate the high output of last year. Due to dry weather the movement of Florida fruit has been late and to date is considerably below 1930.

The index of stocks of meat in cold storage decreased 21 per cent during October, and reached the lowest point of the year. This was the usual seasonal decline, but the monthly index was 5 per cent below October of last year.

Iron and Steel Industry

SEASONAL factors, which usually cause an upturn in activity in the iron and steel industry in October, were lacking last month, and operations continued to recede, although at a slackened pace. Measured by the adjusted index of the Federal Reserve Board, production in the industry declined 6.5 per cent, the smallest relative decline since May. Actual output of pig iron and steel ingots increased slightly for the first time since March, but in each case the daily average output was smaller than in the preceding month. Operations in the steel industry were at the rate of 28 per cent of capacity, the same as in September, but in the first three weeks of November the rate advanced to 30 per cent.

Maintenance of the extremely low rate of operations was reflected in a contra-seasonal recession in both employment and pay rolls, although the latter index was also affected by the wage reductions effective October 1. Employment, after making allowance for the seasonal trend, declined 1.8 per cent, as compared with September, while the unadjusted index of pay rolls was off 2.9 per cent.

Unfilled orders of the United States Steel Corporation declined during the month and while the drop was small, its main significance lies in the fact that it was the first decrease reported for the month since 1923. Bookings of the corporation at the end of the month were 10 per cent below a year ago and 24 per cent below the same month of 1929. The index of new orders for the industry declined sharply during October to the lowest level reached so far. Specifications from some of the leading outlets, particularly the railroad, building, and automotive industries, have been in small volume. The index of structural-steel orders declined to a new low, following the substantial gain in September. The decline in the index of new orders for the 10 months compared with a year ago was 34 per cent, while structural steel orders dropped 28 per cent.

Iron and steel exports again declined in October and were 16 per cent below the preceding month and 55 per cent below October, 1930. Imports were off, but the recession in imports this year has not been as severe as in the export trade. Prices have been easier and the composite iron and steel price has recently eased off to $30.63, against a September average of $31.03. Scrap prices have increased only slightly from the low reached at the end of October.

[1] Adjusted for seasonal variation.

Chemical Industries

CHEMICAL industry developments in October were characterized by a slightly increased activity in certain seasonal products. Employment in the industry declined slightly during the month, according to the Federal Reserve Board indexes. The present level of employment is about 15 per cent under a year ago and almost 30 per cent below the high record employment in October, 1929, the decline from that point having been fairly regular from month to month. Pay rolls in October maintained the slight gain recorded for September, but did not show the small seasonal rise which is normal in the fall.

Stocks of manufactured chemicals and oils rose sharply, but seasonally, in October as compared with the revised September estimate. While stocks in October of this year are higher than at this time in several years past, the average for the first ten months of this year was below that of last year. Stocks of chemical and oil raw materials rose 21 per cent in October as compared with the unusually low stocks of September, present stocks being still about 10 per cent below the quantities on hand at this time in several years past.

Wood rosin production increased slightly in October as is usual at this season. The present level of production is, however, 25 per cent below that of a year ago and 36 per cent below two years ago. Wood turpentine production also increased slightly, though seasonally, in October, with the present output below that of this season one and two years ago by 33 per cent and 49 per cent, respectively.

Alcohol production increased more than seasonally in October, though still 13 per cent under a year ago.

The production of by-product coke increased a little in October as is customary at this time of year. The present level of production is below that of October a year ago by 30 per cent and under that of two years ago by 48 per cent.

Fertilizer consumption in the Southern States, which shows large seasonal fluctuations, increased slightly in October, although there is usually a seasonal decline at this time. Present consumption is, however, about 10 per cent under that of the last two years at this season.

Imports of potash salts and nitrate of soda declined in October, although imports of potash salts usually increase greatly and of nitrate soda slightly at this season. Imports of potash salts in October were about a third less than those of a year ago, and were almost 60 per cent less than imports two years ago at this season. Nitrate of soda imports for the month were 20 per cent greater than a year ago.

[1] Average of 9 months.

Automobiles and Rubber

SCHEDULES of production in the automobile industry were reduced in October by a margin greatly in excess of that usually recorded at this season. The adjusted production index of the Federal Reserve Board stood at the lowest level recorded in recent years and was 43 per cent below October a year ago. The monthly average for January through October is 29 per cent lower than the figure for the same months in 1930 and 59 per cent below the high level of 1929. Passenger-car output continued its decline of the previous five months and was approximately half the already low product of September. Truck production, which had remained fairly steady for three months, also declined sharply and registered a loss for the month of 31 per cent.

Employment in the automotive industry decreased 19 per cent in October, according to the seasonally adjusted index of the Federal Reserve Board. Pay rolls, however, remained practically the same, indicating an increase in working hours. The unadjusted pay-roll index fell less than 1 per cent while the unadjusted employment index declined 21 per cent. In the first two weeks of November some improvement was apparent from the employment index of the Detroit Board of Commerce, which rose from 41.7 to 50.

The export of trucks was the most active section in the entire industry. Total trucks shipped abroad during October exceeded all months since April and the number was 10 per cent greater than shipments in October of last year. Passenger car exports, on the contrary, were less than half the total for October, 1930, and the average monthly exports for January through October were 46 per cent below the same months a year ago.

Pneumatic tire production in September was 19 per cent less than in the preceding month and only slightly under September, 1930. During September domestic shipments in the industry also receded from the August total. The Federal Reserve Board adjusted index of October employment in the rubber products industries recorded a small gain. The unadjusted pay-roll index declined 2 per cent.

Following three successive decreases the importation of crude rubber gained in volume during October. The total import receipts were 6 per cent above the amount recorded for September but 9 per cent below October, 1930.

Textile Industry

THE increased activity in the textile industry registered in September was not maintained in October, and, although the index of the Federal Reserve Board adjusted for seasonal variations in October was 7 per cent below its 1923–1925 average, it was 2 per cent higher than in the same month of last year. Consumption of raw cotton in October was about the same as in September.

Production of 300 classifications or constructions of carded cotton cloths, representing output of a very large proportion of the industry, averaged nearly 57,000,000 yards per week in October, 4.3 per cent more than in September, and the largest weekly output for any month since June. Sales of these cloths in October averaged 45 per cent larger per week than in September, and were 47 per cent more than production. The increase of 117,500,000 yards in unfilled orders considerably more than offset the increase in stocks of 10,900,000 yards; unfilled orders on October 31 represented 6 weeks of production at the current rate of activity, although they were slightly lower than on October 31, 1930. Prices of cotton goods were steady during October, at a level about 25 per cent lower than a year ago.

Wool receipts at Boston in October declined for the second successive month, which was not unusual at that time of the year, and were 24.4 per cent less than in October of last year; the accumulated wool receipts at Boston for the first 10 months of 1931 have been only 2.7 per cent less than during the same period of 1930. The price of territory, fine, staple wool at Boston averaged 58 cents per pound in October as compared with 62 cents in the preceding month and 75 cents per pound in October of last year. Spinning activity in the woolen and worsted industry was at a much lower rate in October than in September, 1931. As compared with the average for the first 10 months of last year the rate of activity from January to October, 1931, averaged higher in both the woolen and worsted industries.

Raw silk deliveries to American mills in October were 8.4 per cent less than in October of last year, but were the largest quantities received by mills in any one month since November, 1930. Wholesale prices of Japanese, double, extra cracks, raw silk at New York changed only slightly from September to October, 1931. Wholesale prices of rayon did not change during that period.

[1] Months do not contain same number of weeks.

Automobiles and Rubber

SCHEDULES of production in the automobile industry were reduced in October by a margin greatly in excess of that usually recorded at this season. The adjusted production index of the Federal Reserve Board stood at the lowest level recorded in recent years and was 43 per cent below October a year ago. The monthly average for January through October is 29 per cent lower than the figure for the same months in 1930 and 59 per cent below the high level of 1929. Passenger-car output continued its decline of the previous five months and was approximately half the already low product of September. Truck production, which had remained fairly steady for three months, also declined sharply and registered a loss for the month of 31 per cent.

Employment in the automotive industry decreased 19 per cent in October, according to the seasonally adjusted index of the Federal Reserve Board. Pay rolls, however, remained practically the same, indicating an increase in working hours. The unadjusted pay-roll index fell less than 1 per cent while the unadjusted employment index declined 21 per cent. In the first two weeks of November some improvement was apparent from the employment index of the Detroit Board of Commerce, which rose from 41.7 to 50.

The export of trucks was the most active section in the entire industry. Total trucks shipped abroad during October exceeded all months since April and the number was 10 per cent greater than shipments in October of last year. Passenger car exports, on the contrary, were less than half the total for October, 1930, and the average monthly exports for January through October were 46 per cent below the same months a year ago.

Pneumatic tire production in September was 19 per cent less than in the preceding month and only slightly under September, 1930. During September domestic shipments in the industry also receded from the August total. The Federal Reserve Board adjusted index of October employment in the rubber products industries recorded a small gain. The unadjusted pay-roll index declined 2 per cent.

Following three successive decreases the importation of crude rubber gained in volume during October. The total import receipts were 6 per cent above the amount recorded for September but 9 per cent below October, 1930.

Textile Industry

THE increased activity in the textile industry registered in September was not maintained in October, and, although the index of the Federal Reserve Board adjusted for seasonal variations in October was 7 per cent below its 1923–1925 average, it was 2 per cent higher than in the same month of last year. Consumption of raw cotton in October was about the same as in September.

Production of 300 classifications or constructions of carded cotton cloths, representing output of a very large proportion of the industry, averaged nearly 57,000,000 yards per week in October, 4.3 per cent more than in September, and the largest weekly output for any month since June. Sales of these cloths in October averaged 45 per cent larger per week than in September, and were 47 per cent more than production. The increase of 117,500,000 yards in unfilled orders considerably more than offset the increase in stocks of 10,900,000 yards; unfilled orders on October 31 represented 6 weeks of production at the current rate of activity, although they were slightly lower than on October 31, 1930. Prices of cotton goods were steady during October, at a level about 25 per cent lower than a year ago.

Wool receipts at Boston in October declined for the second successive month, which was not unusual at that time of the year, and were 24.4 per cent less than in October of last year; the accumulated wool receipts at Boston for the first 10 months of 1931 have been only 2.7 per cent less than during the same period of 1930. The price of territory, fine, staple wool at Boston averaged 58 cents per pound in October as compared with 62 cents in the preceding month and 75 cents per pound in October of last year. Spinning activity in the woolen and worsted industry was at a much lower rate in October than in September, 1931. As compared with the average for the first 10 months of last year the rate of activity from January to October, 1931, averaged higher in both the woolen and worsted industries.

Raw silk deliveries to American mills in October were 8.4 per cent less than in October of last year, but were the largest quantities received by mills in any one month since November, 1930. Wholesale prices of Japanese, double, extra cracks, raw silk at New York changed only slightly from September to October, 1931. Wholesale prices of rayon did not change during that period.

[1] Months do not contain same number of weeks.

Food Industries

PRODUCTION in the food products industry declined slightly during October, according to the adjusted index of the Federal Reserve Board. The October level corresponded to the average monthly figure, from January through October of the current year. The monthly average for the first 10 months was 4 per cent below last year and 9 per cent below 1929. After remaining comparatively steady for three months, the Federal Reserve Board's adjusted index of employment in the food industries declined. The October index was 2 per cent lower than that recorded for September and 6 per cent below October of last year. The monthly average to date is 7 per cent under the average for the first 10 months of 1930 and 11 per cent below a similar period in 1929. The level of wholesale prices in the industry remained steady and receded only a fraction of 1 per cent for the month of October. Prices were 18 per cent below October of last year, while the monthly average for the first 10 months of 1931 was also 18 per cent lower than during the same period a year ago.

Wheat receipts at the principal markets continued in October the seasonal decline of the two preceding months. The total receipts for the month were 14 per cent above the same month in 1930, and brought the average for the first 10 months of 1931 to 8 per cent above a similar period last year. The visible supply of wheat in the United States at the end of October was 3 per cent less than the amount recorded a month earlier. Exports were 25 per cent above October of last year and reached the same level as October, 1929.

October receipts of corn at primary markets increased sharply from the extremely low figure of the preceding month, but the 10-month average was 29 per cent below last year. The visible corn supply in the United States increased slightly during October. The decline in price of the last four months, evidenced by No. 3 yellow at Chicago, continued during October. The price fell to a low mark for the year and was 54 per cent lower than that quoted for the same month a year ago.

Cattle receipts at principal markets recorded a dedelayed seasonal increase. Hog receipts continued the gain of last month which was also seasonal. The total volume of hogs received was slightly greater than the figure for October, 1930.

Raw sugar imports in October had a further decrease, while coffee imports were greater after a decline of two months.

Forest Products

LUMBER production in October, according to the adjusted index of the Federal Reserve Board, continued the steady decline which has been taking place since last May. Present production, which is down to 35 per cent of the 1923–1925 average, represents a decline of 35 per cent from that of October, 1930, and about 60 per cent from production two years ago.

Employment and pay rolls both declined more than seasonally in October. Employment has been declining steadily since the summer of 1929, the present level being approximately 22 per cent below October a year ago and less than half of the 1923–1925 average. Pay rolls have been declining more rapidly than employment, reflecting wage readjustments in the industry and part-time employment; in October, 1930, the index for pay rolls (1923–1925 average = 100) was 3 per cent less than that for employment and in October of this year pay rolls were 21 per cent below.

Marketing of forest products increased seasonally in October, being now about 9 per cent less than a year ago and 38 per cent under average marketings in 1923–1925. Naval stores, or gum, marketings in October increased slightly as compared with the revised estimate for September, whereas there is usually a small seasonal decrease at this time.

Southern pine production remained steady at 117,000,000 board feet in October, which is 45 per cent below production at this time a year ago. New orders declined to 135,000,000 board feet, which is about 37 per cent less than new orders at this time in 1930. Unfilled orders dropped to the lowest in many years, being about 47 per cent below the October, 1930, figure.

Douglas fir production declined sharply in October (the estimate for this month includes an extra week) to 150,000,000 board feet, the lowest yet recorded. This is about 28 per cent less than production a year ago and 52 per cent less than two years ago. New orders likewise declined to a new low point in October and at present are about 26 per cent below those of a year ago and less than half those of October, 1929. Unfilled orders, which reached a record low point, were 41 per cent off from a year ago and only a little more than a quarter of unfilled orders two years ago.

Production of hardwoods remained steady in October as compared with the preceding month, but present output is 33 per cent less than a year ago and 65 per cent less than two years ago. New orders have remained about the same for several months, while unfilled orders rose somewhat in September but declined again in October.

Car loadings of forest products increased about 20,000 cars from the low point recorded in September.

Monthly Business Statistics

The following table contains a summary of the monthly figures designed to show the trend in important industrial and commercial movements. These data represent continuations of the figures presented in the 1931 Annual Supplement to the Survey of Current Business, in which monthly figures for the past seven years may be found, together with explanations as to the sources and basis for the figures quoted. The figures given below should always be read in connection with these explanations. For later data, which have become available since these data were compiled, see recent Weekly Supplements to the Survey.

SURVEY OF CURRENT BUSINESS

UNITED STATES
DEPARTMENT OF COMMERCE
BUREAU OF FOREIGN AND DOMESTIC COMMERCE
WASHINGTON

VOLUME 11 NUMBER 12

Economies ... in research

Economy of time!

Authoritative figures prepared by Government statistical experts. Arranged in classifications proven most convenient for industrial and economic investigations and compilations. Such data to measure your production, sales, prices, employment, stocks, consumption, unfilled orders, and general condition in comparison with the totals for your industry.

Substitute these basic facts for time-consuming preliminary compilations in your own office!

Economy of money!

For $1.50 a year much timely data at your fingertips.

Substituted for the expense of hours of collecting, totaling, checking, revising.

Such economies extend to field as well as desk research . . indicating the wisdom of proposed sales procedure. The investigator who has the background of facts at hand will release dollars of research appropriations which will find their way into the net profit column.

THE SURVEY OF CURRENT BUSINESS is prepared to help you effect such economies

---

A Christmas Suggestion

THE SURVEY
OF
CURRENT BUSINESS

is a suitable gift for a Business Man

EXPLANATORY

The Survey of Current Business is designed to present each month a picture of the business situation by setting forth the principal facts regarding the various lines of trade and industry. The figures are very largely those already in existence. The chief function of the Survey is to bring together those data which, if available at all, are scattered in hundreds of different publications. A portion of these data are collected by Government departments, other figures are compiled by technical journals, and still others are reported by trade associations. The Survey of Current Business computes the indexes on total stocks, new orders, agricultural marketings, crop marketings, and unfilled orders based on available data.

SOURCES OF DATA

The sources and inclusiveness of the data appearing in the table "Monthly Business Statistics" will be found noted in the 1931 Annual Supplement to the Survey of Current Business, and the sources of the weekly data are given on page 4 of the February 5, 1931, issue of the Weekly Supplement to the Survey of Current Business.

HISTORICAL DATA

Monthly data on all the various series carried in the Monthly Survey will be found in the 1931 Annual Supplement to the Survey, running back seven years and in some cases eight years. Data previous to that included in the 1931 Annual Supplement will be found in the monthly Surveys prior to 1924.

RELATIVE AND INDEX NUMBERS

To facilitate comparison between different important items and to chart series expressed in different units, relative numbers (often called "index numbers," a term referring more particularly to a special kind of numbers described below) have been calculated. The monthly average for 1923–1925 has usually been used as a base equal to 100.

The relative numbers are computed by allowing the monthly average for the base year to equal 100. If the movement for the current month is greater than the base, the relative number will be greater than 100, and vice versa. The difference between 100 and the relative number will give at once the per cent increase or decrease compared with the base period. Thus, a relative number of 115 means an increase of 15 per cent over the base period, while a relative number of 80 means a decrease of 20 per cent from the base.

Relative numbers may also be used to calculate the approximate percentage increase or decrease in a movement from one period to the next. Thus, if a relative number for one month is 120 and for a later month is 144, there has been an increase of 20 per cent.

When two or more series of relative numbers are combined by a system of weightings, the resulting series is denominated an index number. The index number, by combining many relative numbers, is designed to show the trend of an entire group of industries, or for the country as a whole, instead of for the single commodity or industry which the relative number covers. Comparisons with the base year or with other periods are made in the same manner as in the case of relative numbers.

SEASONAL ADJUSTMENTS TO INDEXES

Seasonal variations are found in most series of economic statistics for which monthly values are obtainable. Consumption and production of commodities, interest rates, bank clearings, railroad freight traffic, and many other types of data are marked by seasonal swings repeated with minor variations year after year. These, in so far as they exist at all, are definitely periodic in character, with a constant 12-month period. In cases where an adjustment is noted for a series carried in the Survey, the index has been corrected for number of working or business days in the various months and then adjusted for seasonal variation. The index figures thereby become comparable throughout the series.

METHODS OF USE

Methods of using and interpreting current business statistics have been collected by the Department of Commerce from many business concerns and are described in a booklet entitled "How to Use Current Business Statistics," together with methods of collecting statistics. This booklet may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., at 15 cents per copy.

This arrow points to a billion dollars—or more of purchasing power

If you plan to do business in or with the Gulf Southwest it is very important for you to keep tabs on this billion

In other words, the cotton crop of this region is worth annually a billion dollars—or more. It is subject, however, to the vagaries of weather and insect infestation and to price fluctuations, resulting sometimes in a variation of over $5,250,000 in the income of one county during a 3-year period.

COTTON

PRODUCTION AND DISTRIBUTION IN THE GULF SOUTHWEST

a 311-page illustrated volume, gives you the findings of the extensive survey of production and distribution of cotton and cottonseed in this area, conducted by the Domestic Regional Division. To quote the foreword: "All the different factors affecting cotton production are discussed, and, in so far as possible, are correlated with particular production districts."

Income from cotton is estimated on a county basis and expenses such as feed, fertilizer, and hired labor are listed. The relative importance of different markets is revealed.

ISSUED AS DOMESTIC COMMERCE SERIES No. 49
Price 30 cents. *For sale by the Superintendent of Documents United States Government Printing Office, Washington, D. C., or any district office of the United States Department of Commerce*
